

White Paper

Disclaimer

This whitepaper is to present STRATTON OAKMONT FINANCE ("SOF") Decentralized Exchange and its native cryptocurrency, SOF token. The information herein should not be construed to represent a conclusive or exhaustive representation of the project or to imply any element of a contractual relationship between the project and potential investors. The sole purpose of this whitepaper is to provide relevant and reasonable information to potential investors/token holders of SOF Exchange and its native token SOF token to enable them to make a reasonable decision before they undertake a thorough analysis of the company with the intent of participating or investing in the project. The content of the whitepaper does not contain anything that should be deemed as a prospectus soliciting for investment, nor interpreted to mean a sale or issuance of interests, digital assets, or securities. The document has been composed in accordance with, but not subject to, laws or regulations of any jurisdiction designed to protect that are currently underway, in development or otherwise under consideration; (vi) renewal of the Company's current agreements; and (vii) future liquidity, working capital, and capital requirements. Every forward-looking statement is to ensure potential investors understand management's beliefs and opinions in respect of the future so that they may use such beliefs and opinions as one factor in evaluating an investment. The Company undertakes no obligation to update forward-looking statements if circumstances or management's estimates or opinions should change except as required by applicable securities laws. The reader is cautioned not to place undue reliance on forward-looking statements. This whitepaper may be updated, from time to time, whenever there is a strategic change of business model or strategy, without prior notice to readers. Every updated version of the whitepaper will be made available on our website immediately after its issuance. investors, projects, and joint ventures; (iv) execution of the Company's vision and growth strategy, including with respect to future M&A activity and global growth; (v) sources and availability of third-party financing for the Company's projects; (vi) completion of the Company's projects

Abstract

Stratton Oakmont Finance (SOF) is a next-gen decentralized exchange (DEX) designed to provide the most effective exchange ecosystem with the lowest transaction fees for users.

Moreover, the platform will do charity projects which are absolutely chosen by the community.

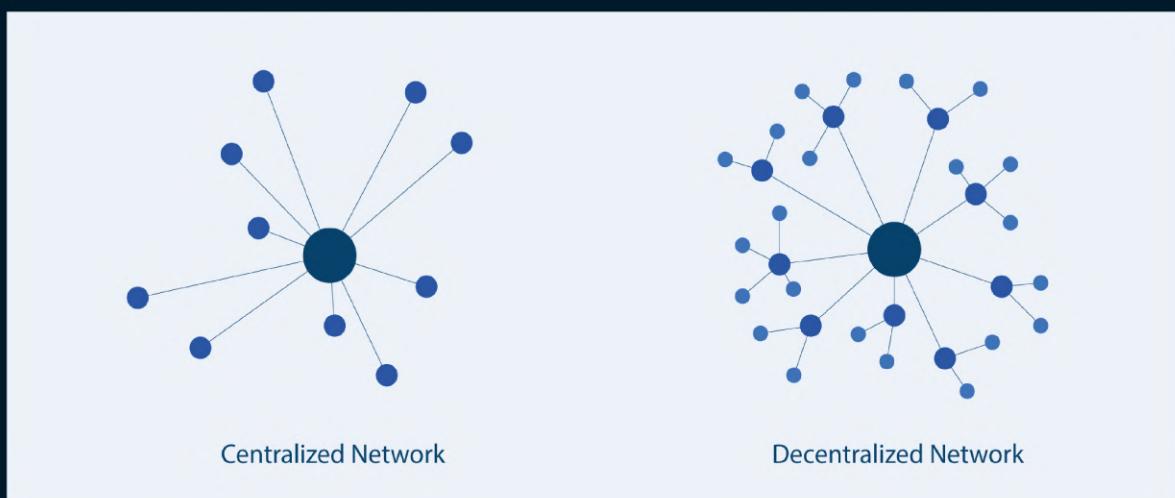

More importantly, the platform will have a FREE educational platform for cryptocurrencies and blockchain technology. We recognize that financial service firms are beginning to realize a greater demand from their clients who constantly yearn for better financial opportunities. Stratton Oakmont Finance platform is built on Binance Smart Chain and is powered by its native token- SOF, which enables all transactions on the platform.

The platform is built on the principles of security and reliability. Just like the wolf of the Wall Street, the platform is tremendously on its way to reaching milestones with you as a potential investor. Let's get to Jordan Belfort together!

Decentralized Finance

Abstract

Despite emerging just a year ago, Decentralized Finance (DeFi) has taken the center stage in driving the world of cryptocurrency. There is an astronomical growth in blockchain-based financial products, and DeFi being touted as the next big thing, or rather the future of finance. The reasons behind the growth of DeFi are based on its ability to improve the capabilities of traditional financial institutions, such as banks and payment processing firms. In other words, DeFi has the unique ability to expand financial services to the masses.

1.1 But what exactly is DeFi and how does it work?

DeFi is a financial service that runs on a decentralized platform with no central authority to control the flow of money and activities. It means that DeFi has just taken the elements of traditional financial elements and decentralized them so that it works with central authorities or intermediaries such as banks.

This capability is made possible with the help of a smart contract, which will be explained later in this Whitepaper.

In short, DeFi is the merger between traditional banking services and blockchain technology, creating a seamless financial system to benefit the masses that have traditionally lacked access to affordable financial services.

It's this openness that has incentivizes most investors to see DeFi projects as better investment alternatives.

As a result, the value of tokens run by DeFi protocols is running into billions of dollars and continues to rise. This is where SOF, the next-gen exchange, belongs. SOF gives more power to users, with some of the most democratic and generous rewards to holders and liquidity providers/investors.

It's no doubt the cheapest DEX you'll ever find in the market today. Because DeFi protocols are run on Decentralized Exchanges (DEXs), it's important we understand what a DEX is and how it works.

What is a Decentralized Exchange?

Decentralized exchange is a fully autonomous trading pair matching system, which allows peer-to-peer trade between users. The protocol enables traders to transact without relying on any intermediary institution to manage the ledger and handle funds. DEX leverages blockchain technology to create order records, manage order books, and facilitate trade through smart contracts.

DEX system operates contrary to the centralized model that requires an intermediary to facilitate transactions. A centralized system requires users to deposit their funds to an exchange. The exchange then issues an IOU to be traded on the platform. In case of a withdrawal request, the IOUs are converted back to funds and sent to the owners.

The process makes such transactions expensive, thus betraying the principle of cheaper transactions as envisioned in blockchain technology and cryptocurrency.

To solve the cost problems, DEX uses smart contracts - self-executing contracts with terms of the agreement between a buyer and seller directly written into lines of code, which is within the blockchain network.

This is achievable by eliminating the intermediaries and lowering the charges incurred in facilitating transactions. The codes manage transactions and ensure that all the predetermined requirements are met before completing the transaction. Smart contracts ensure that transactions are trackable and irreversible.

The Strattmont Oakmont Finance (SOF) Platform

The conceptualization of SOF was based on the need to eliminate the high transaction fees, often referred to as gas fees. Additionally, it gives users the full authority to supervise and approve trades made within the platform. SOF works with smart contracts to operate automated order books/order makers and trades, which fulfills the peer-to-peer model. Remember that the peer-to-peer transaction is what inspired Satoshi Nakamoto, the mysterious creator of Bitcoin- the first successful cryptocurrency.

The inspiration to create SOF decentralized exchange also comes from Elon Musk's power and recent influence on the crypto world. It's more like the SpaceX CEO is the central authority working to manipulate cryptocurrency prices such as Bitcoin and DOGE. To counter such unmerited powers, we are bringing Elon Musk's antidote, Jordan Belfort, into the Crypto Space.

SOF as a decentralized exchange has a specific combination of features that makes it stand out among its peers:

Easy to Use
Platform

Free Crypto
Classes for All

Investor
Owning

Charity
Programs

Live OnScreen
Support

In summary, these features define what SOF Exchange is all about:

1. The most competitive transaction fees
2. Free education to users on everything blockchain and cryptocurrency,
i.e. crypto investment strategies
3. Direct engagement with charity projects as decided by the community
4. The ability for users/investors to retain control of their funds
5. Next-level liquidity
6. Light-speed swaps
7. Ability to add your own credit card and own wallet to the exchange

SOF Exchange Features

Easy to use Platform

Users of most decentralized exchanges have struggled to deal with complex DEX platforms that require them to learn and get familiar with the platform and the process. The SOF Exchange team has developed a platform to solve this problem. The easy-to-use SOF interface means anyone can enroll and get started by following the easy steps to making trades on the platform.

Free crypto classes for ALL

Have you ever been in a situation where you have to explain crypto to someone? We guess you have. The truth is, cryptocurrency and Blockchain technology is a headache for many people, and a survey has shown that 1 in 3 crypto investors know little to nothing about cryptocurrency.

Live OnScreen Support

Despite knowing its immense value, many exchanges have not exploited customer support fully to help their users and earn investors' value as liquidity providers. SOF is fixing the issue with a one-of-its-kind live Onscreen Chat. The support is expected to run 24/7 to ensure that all your queries are attended to promptly.

Investor Owning

Trading on SOF Exchange may be fun and lucrative with high earning potential as a trader or investor, but nothing comes close to the possibility of being a part-owner as an investor. As a governance token, owning SOF will make you a decision-maker about the platform's future. For example, you'll be making critical decisions such as the services that should be prioritized. Who doesn't want to be part of a bigger decision-making organ anyway? What's even more interesting is that if you lock your investment on the platform, you'll also get a small portion of the trading volume.

Charity Programs

Humanity has faced the biggest challenge with the recent outbreak of the coronavirus pandemic. The pandemic has disrupted our lives and we can't seem to deal with these unique challenges with the old ways. While Bitcoin was seen as the way to go, it's coming out as one of the most expensive tokens both in mining and transfer. This is not practical for charities, as they seek to get affordable tokens that can be channeled into charitable programs. SOF Exchange will work with charities to ensure they get access to funding that will help them deal with the present challenges affecting humanity.

SOF Token

SOF is a BEP-20 token designed to be the native token for SOF Exchange. This Binance Smart Chain standard token functions similar to Ethereum's ERC-20 standard. BEP-20 is a developer-friendly token standard that enables anyone to deploy fungible digital currencies or tokens on Binance Smart Chain.

Why SOF Token ?

The biggest advantage of this BEP-20 token standard is that you can port it in the form of pegged BEP-20 tokens from other chains.

For example, you could use Binance Bridge to swap Bitcoin (BTC) for BTCB (BEP-20) tokens backed by BTC. BTCB (BEP-20) tokens can then be deployed in DeFi protocols to earn a yield on Bitcoin. The same can be applied with any other major tokens such as XRP, ETH, etc.

SOF tokens allow the liquidity providers to sell their liquidity or transfer them between accounts without impacting liquidity pools, hence ensuring users trade without any hindrance to the possible lack of liquidity.

Why Binance Smart Chain?

Binance Smart Chain (BSC) is known for some of the most important features that make them superior to its competitors. The features include:

- A rich and growing digital asset ecosystem powered by Binance DEX, the leading Exchange
- Cheap transaction fees that reach as low as 1 cent
- High performance with a network capable of producing a block every 3 seconds
- Cross-chain DeFi mechanisms that increase DeFi interoperability
- A supportive Binance ecosystem that funds and bootstraps many DeFi projects
- A growing ecosystem of millions of users across Binance.com and Binance DEX
- A network of major crypto projects already collaborating with BSC

Binance Smart Chain (BSC) is known for some of the most important features that make them superior to its competitors. The features include: SOF Exchange is powered by smart contracts provided by the Binance Smart Chain (BSC). Smart Contracts are self-executing contracts with predefined terms of agreements between the users written on lines of codes. Unlike the IEO model of the centralized system, smart contracts promote a high level of security and transparency.

These autonomous contracts enable trusted transactions among anonymous parties without the need for a central authority.

BSC smart contracts boast functionality and compatibility with the Ethereum Virtual Machine (EVM). BSC works on a proof-of-stake consensus algorithm. The flexibility afforded by BSC gives you the power to earn passive income while taking full control of your investment.

Auditing by Solidity Finance:

Smart contract auditing helps in detecting and dealing with vulnerabilities that may affect a project's operation. Problems such as vulnerability to Denial-of- Service (DoS) attacks as well as those unique to the blockchain software can be detected through smart contract audits and resolved. Other concerns with smart contracts include gas limit issues, reentrancy, cross-function race condition, and underflow.

SOF Exchange protocol is working with BSC smart contract that is fully audited by Solidity Finance, constantly checking our token contracts, security audits, and wallets. Solidity Finance is a leading smart contract auditor now protecting over \$1 billion in on-chain value across 300+ projects.

Solidity Finance provides a security audit methodology, which is in line with our goal of giving the most secure DeFi services to our clients. The process involves manual line-by-line code reviews to ensure the logic behind each function is sound and safe from common attack vectors. Through this process, your tokens are safe from any potential theft or hack.

Tokenomics

BEP-20 Token on the Binance Smart Chain.

The first beneficiary of the project is early adopters, who will be rewarded with platform incentives, with 3% of their total token supply allotted to them. SOF platform does not charge any fees.

Stakeholders of the SOF Token will get all swap trading fees as shown below:

Total Supply: 1,000,000,000,000 Tokens.

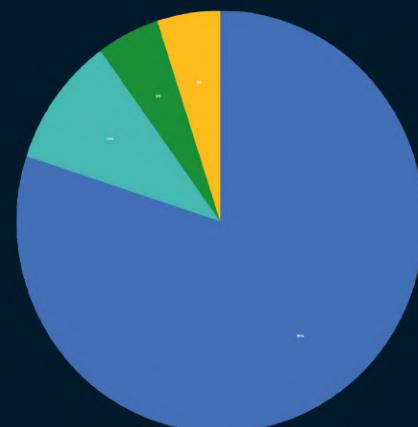

3% Burn
3% Holders
4% locked in Liquidity Pool on PancakeSwap

Distribution:

10% Marketing/Charity
80% Public and Private Sale
5% Team
5% Development

- Marketing/Charity
- Development

- Public/Private Sale
- Team

Roadmap

1

- FAIR LAUNCH SOF TOKEN
 - LISTING PANCAKESWAP
 - LISTING COINGECKO
 - LISTING COINMARKETCAP
 - LISTING WHITEBIT
-

2

- EXCHANGE DEVELOPMENT
 - EDUCATION PLATFORM DEVELOPMENT
 - CHOOSING DONATION PROJECTS
 - MORE LISTINGS
 - OPEN OFFICE IN LONDON
-

3

- INFLUENCER COLLABORATIONS
 - MARKETING CAMPAIGNS
 - COMMERCIALS
 - ENTRY AFRICAN MARKET
 - OPEN MORE OFFICES WORLDWIDE
 - ONBOARDING JORDAN BELFORT
-

4

- LAUNCH EXCHANGE
 - LAUNCH EDUCATION PLATFORM
 - STARTING DONATIONS CAMPAIGNS WITH CELEBRITIES
 - TO THE MOON 
-

Conclusion

With the token sales coming up in the next few days, it's the right time to jump the train and reap the amazing benefits that Stratton Oakmont Finance (SOF) Exchange is offering at completely low criteria for entry. It's also amazing how the SOF Exchange team has stayed transparent in its project progress, which makes them more trustworthy.

SOF platform is built with plenty of security and reliable services. Just like the "Wolf of the Wall Street", the platform is tremendously on its way to reaching milestones with you as a potential investor.

Let's get to Jordan Belfort together. There is every chance that early adopters will reap big, and that could be you!
